

# Pushing The Boundaries: Engineering-based Data-driven Analytics For Intelligent Manufacturing

**Challenges, New methods & Case studies**

Xiaoning Jin  
Assistant Professor  
Dept. of mechanical & Industrial Engineering  
Northeastern University

# OUTLINE

- ❑ Sensor-Based PHM
- ❑ Challenges for Machine learning for PHM
  - Imbalanced data
  - Multi-source multi-modal data
- ❑ Integrating Engineering Knowledge and Data Analytics

# Multi-Model Data Fusion in Manufacturing

## ❑ Multisensory systems:

Audio & visual

## ❑ Biomedical, Healthcare:

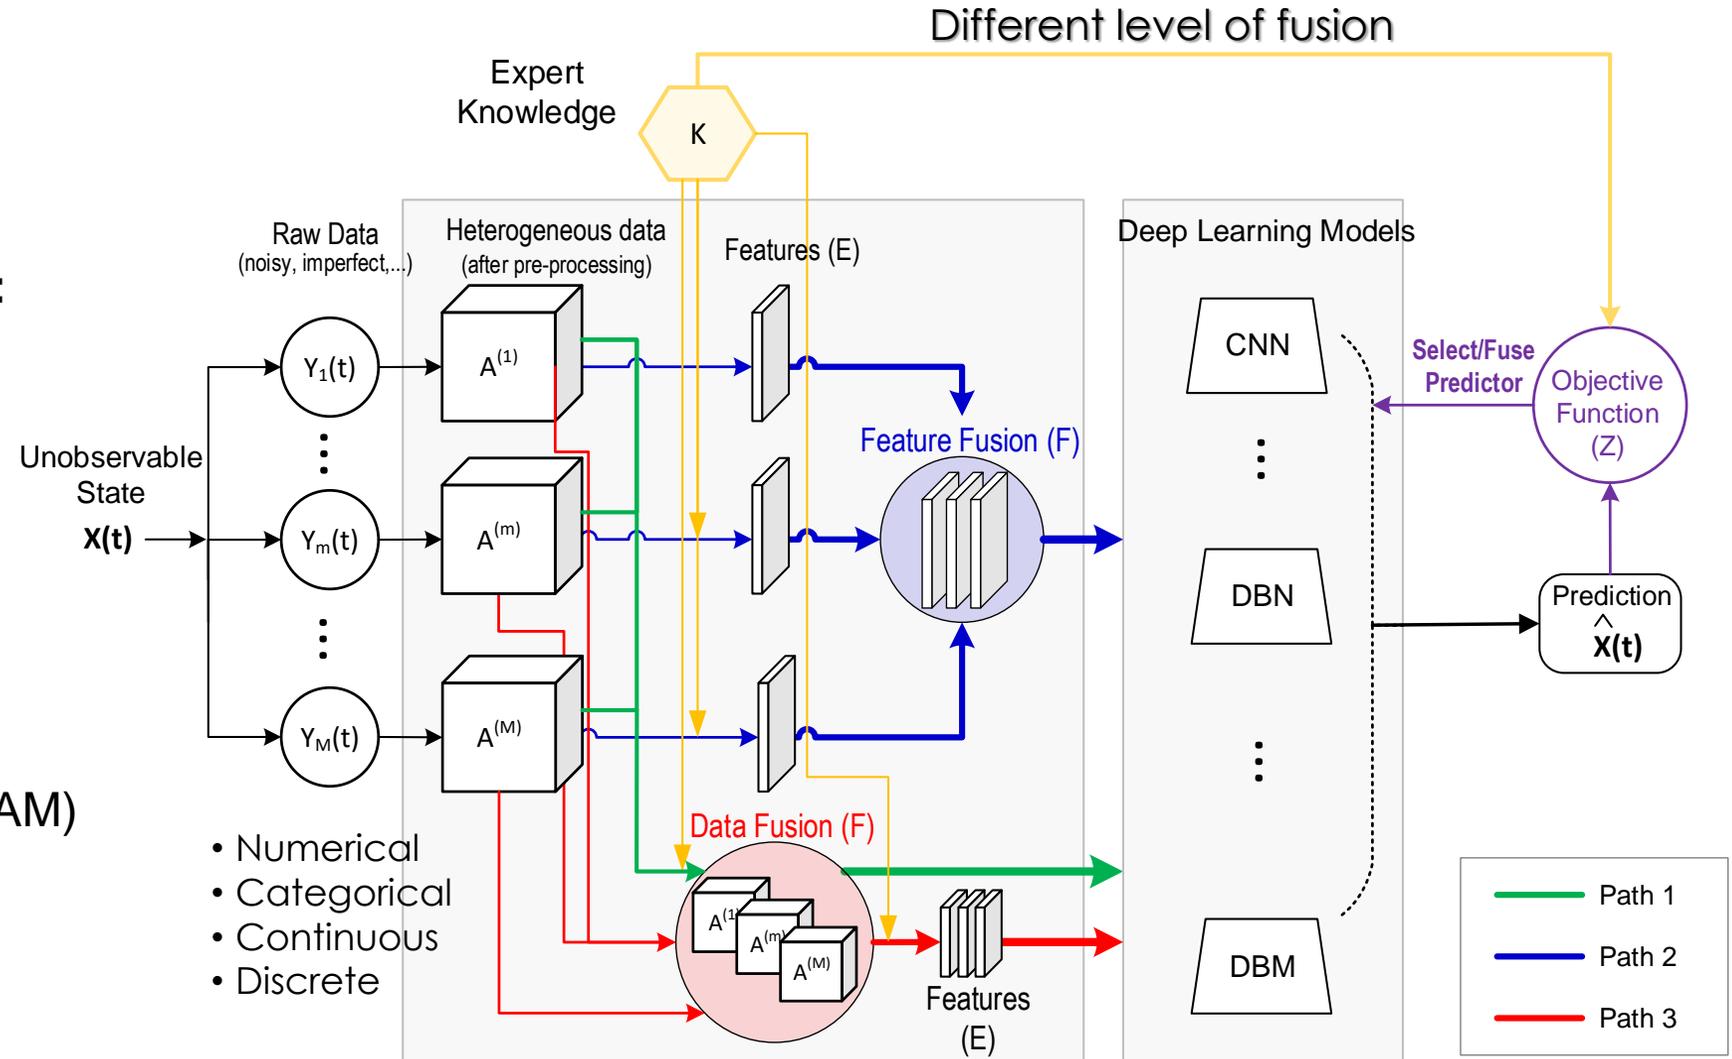

EEG & fMRI

## ❑ Autonomous vehicles:

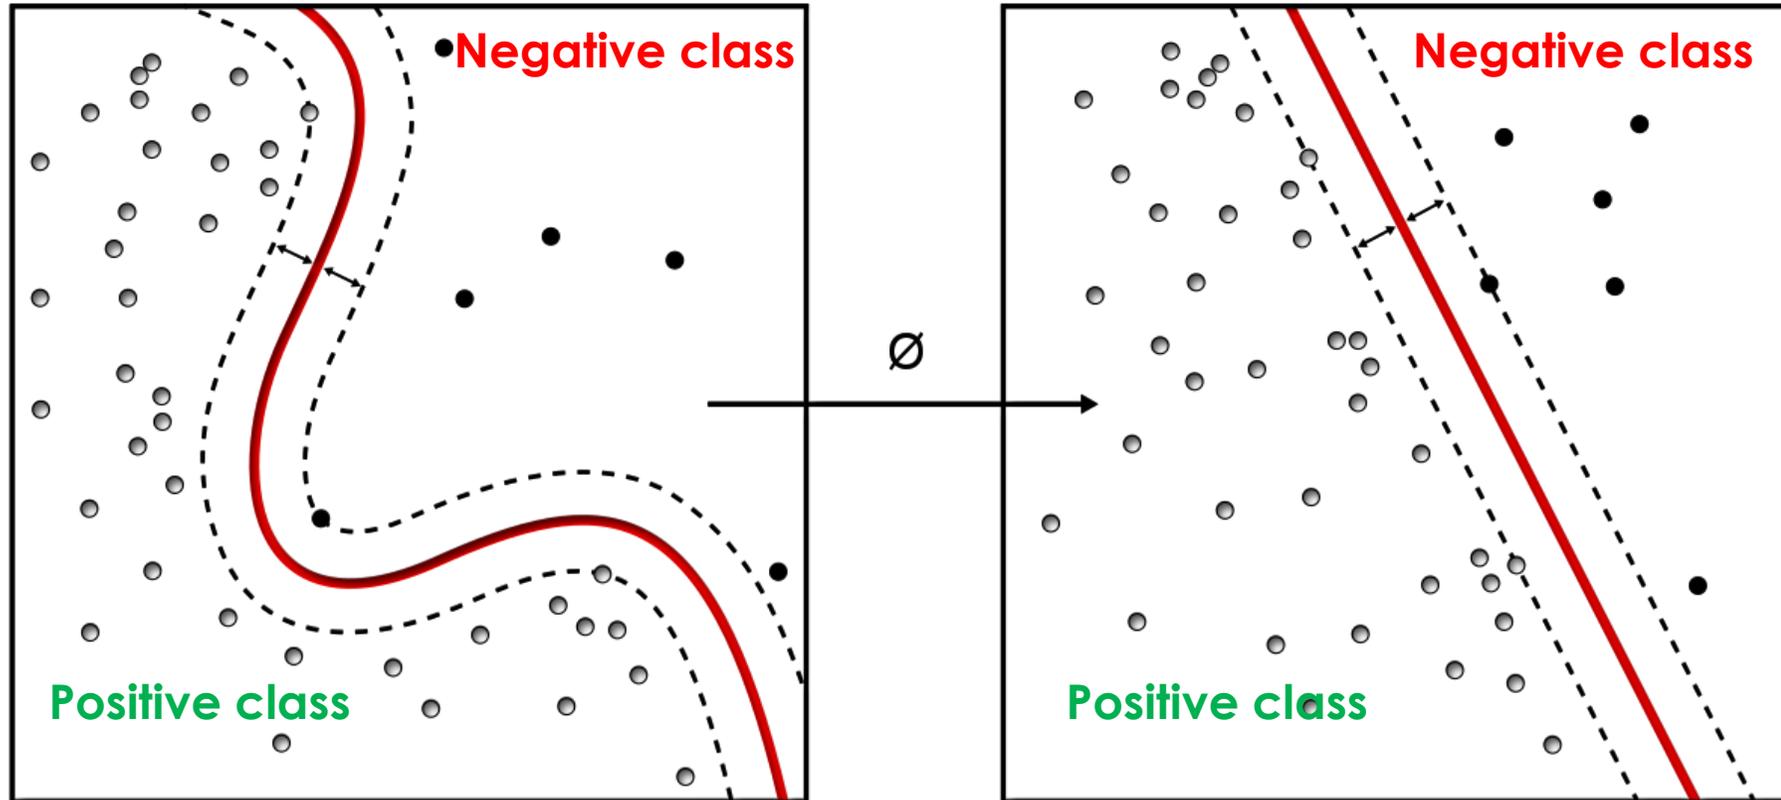

LiDAR, radar,

## ❑ Manufacturing:

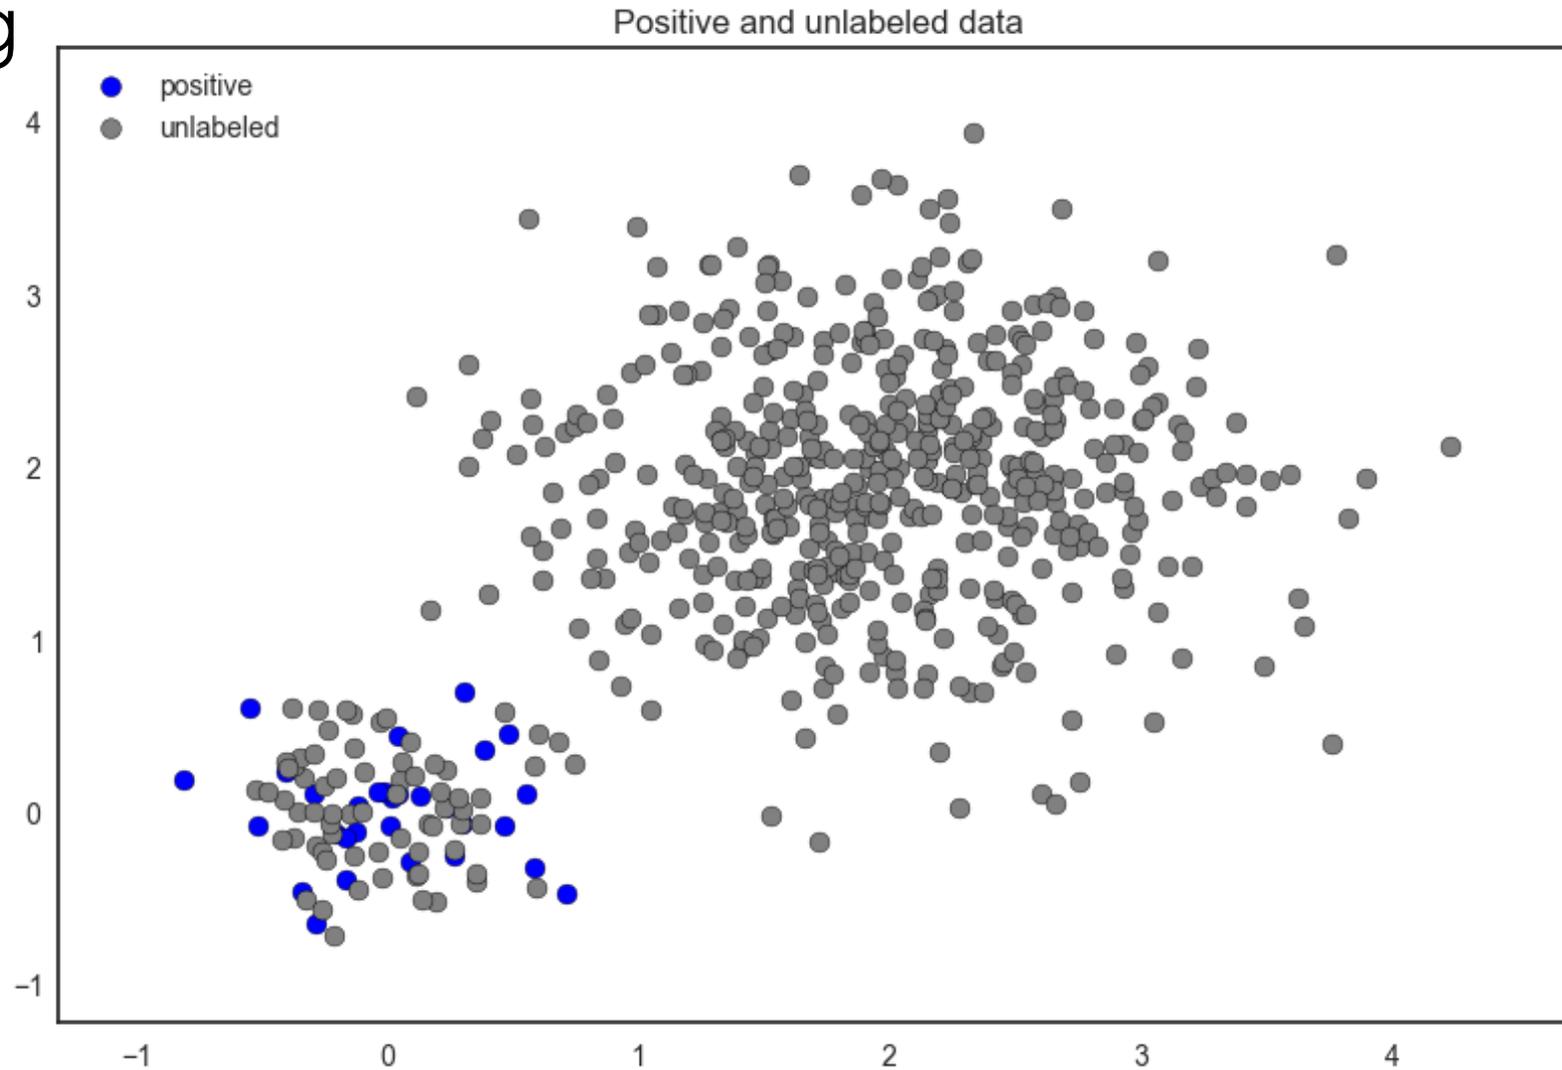

- Sensor data
- Controller data
- Design data (CAE/CAM)
- Production data
- ...

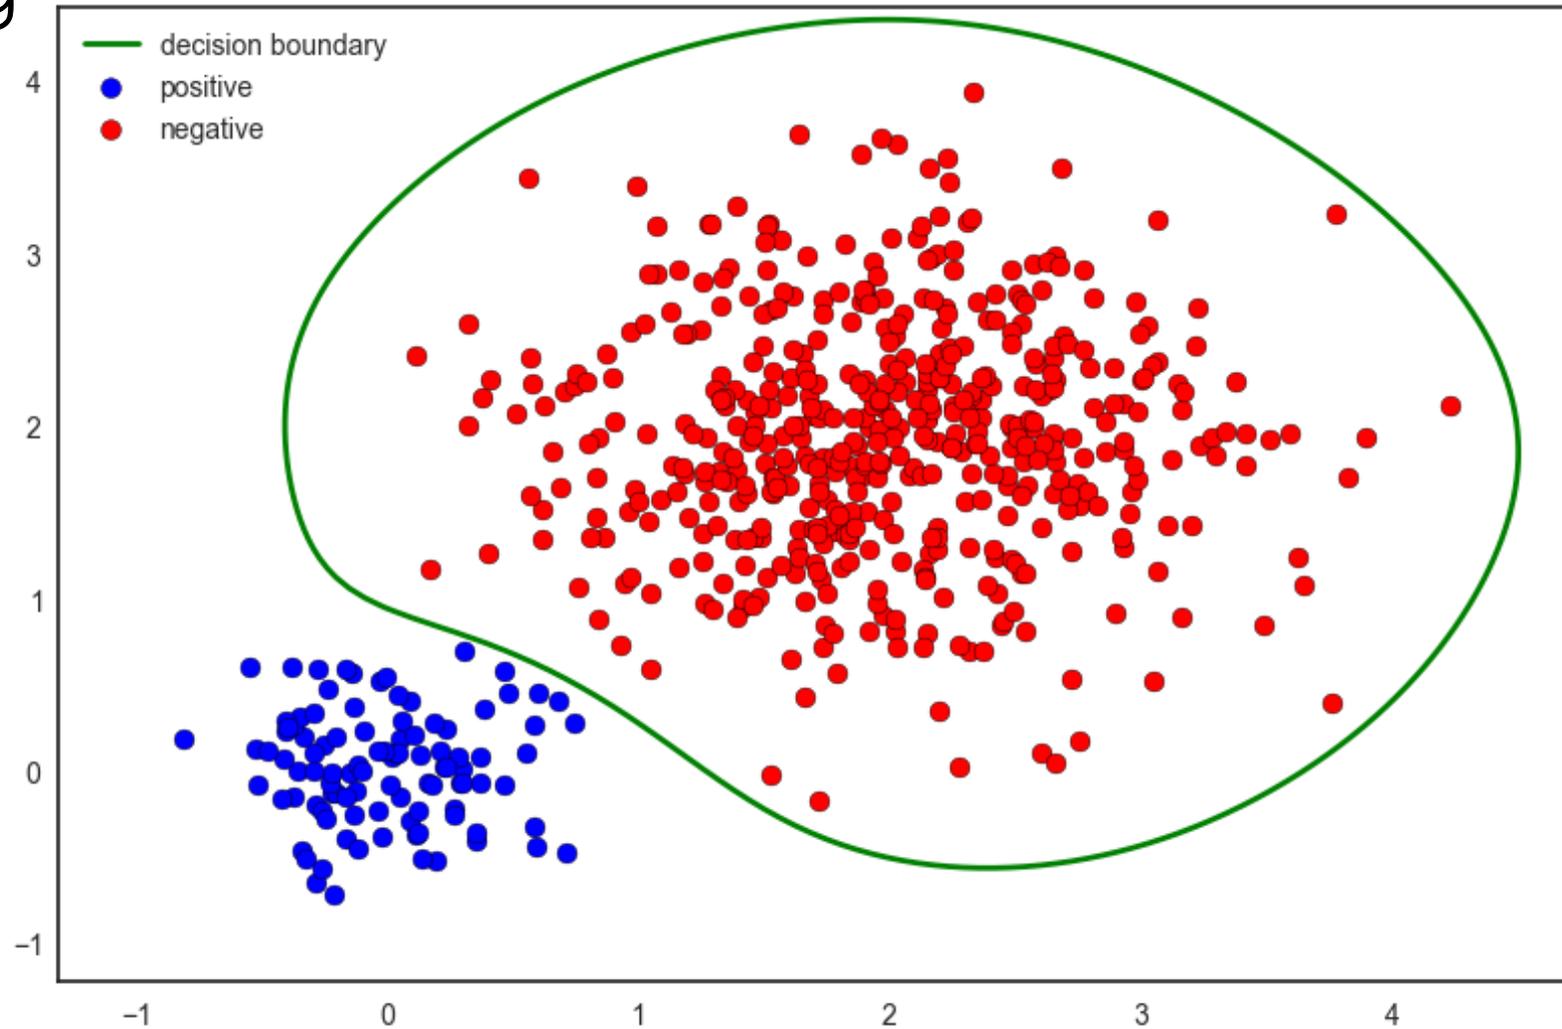

# Class-imbalanced Data Learning for Fault Detection

# Anomaly Detection with Positive and Unlabeled (PU) Learning

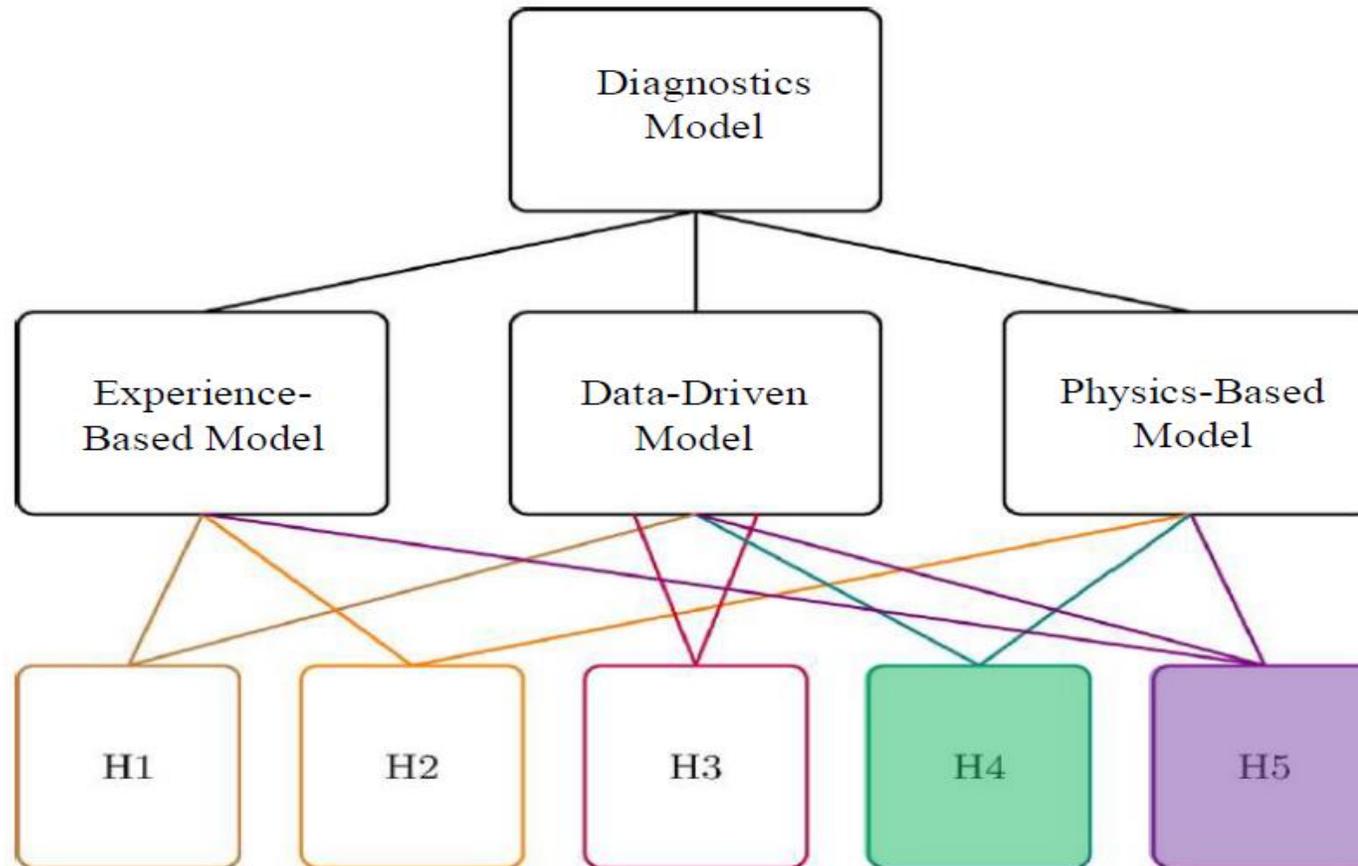

# Anomaly Detection with Positive and Unlabeled (PU) Learning

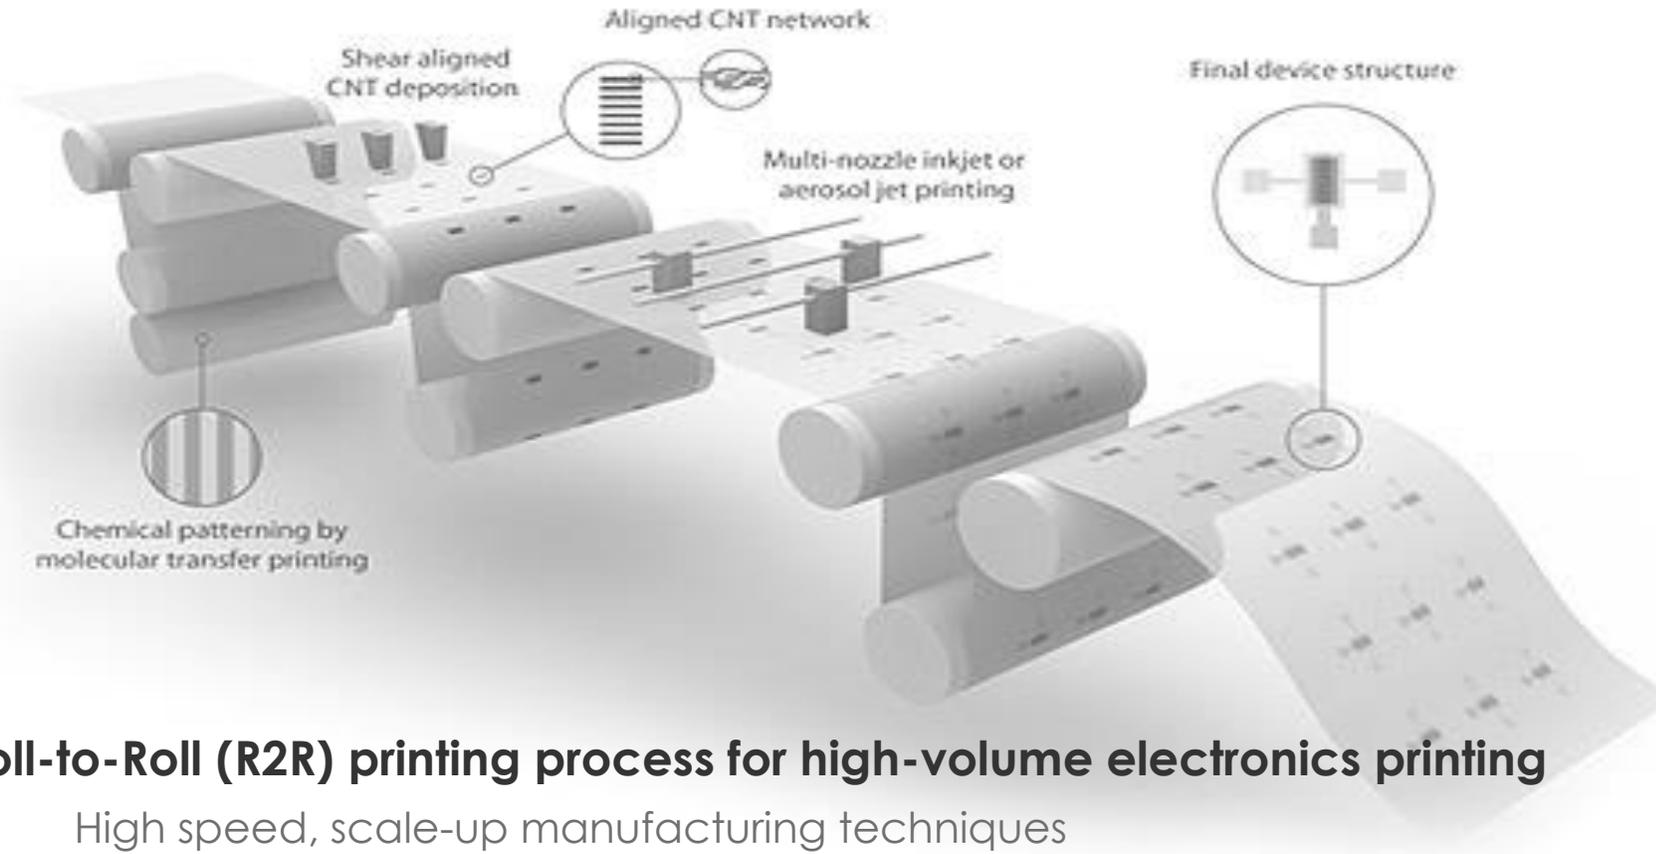

# Physics-based Model + Data-driven Approach

An integrated **physics-based** and **data-driven** prognostics for degradation modeling of vehicle sub-systems under different environments, each dynamic.

# Case Study I

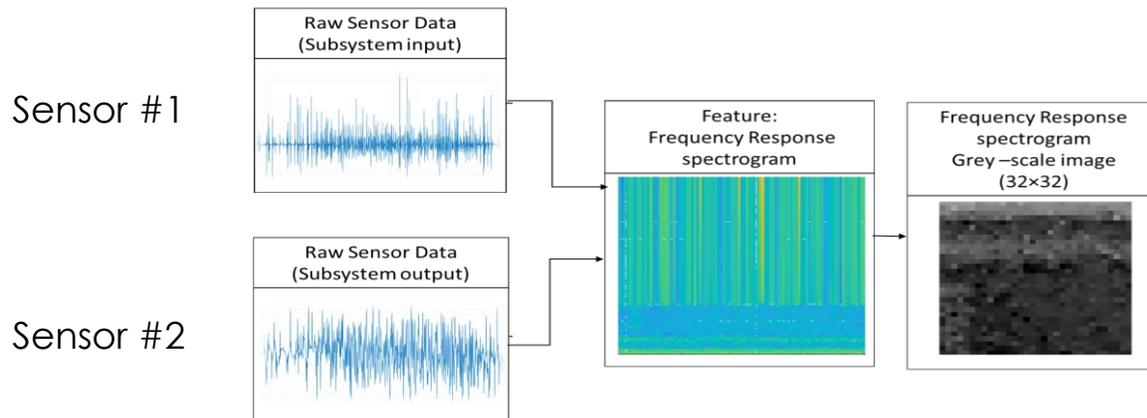

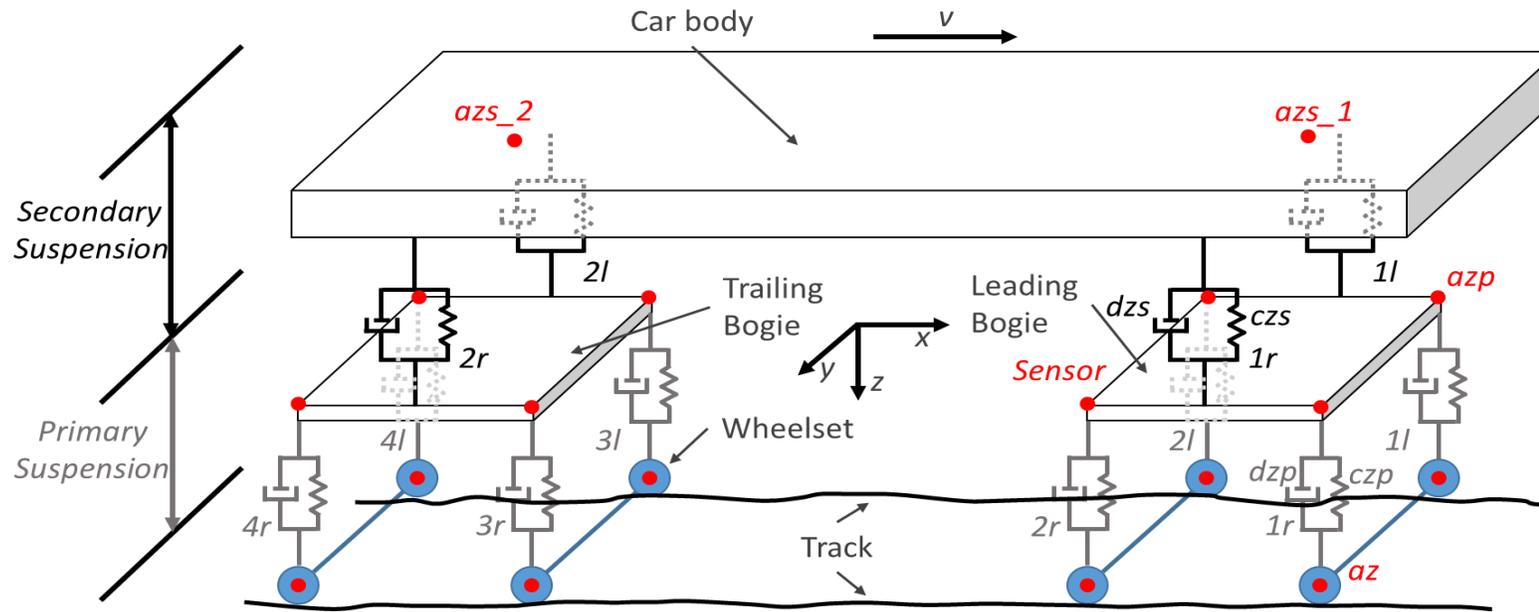

## Roll-to-Roll (R2R) printing process for high-volume electronics printing

- High speed, scale-up manufacturing techniques
- High-resolution requirement for build devices “on-the-fly”.
- Sensor-based process monitoring
- Process optimal control and performance assurance

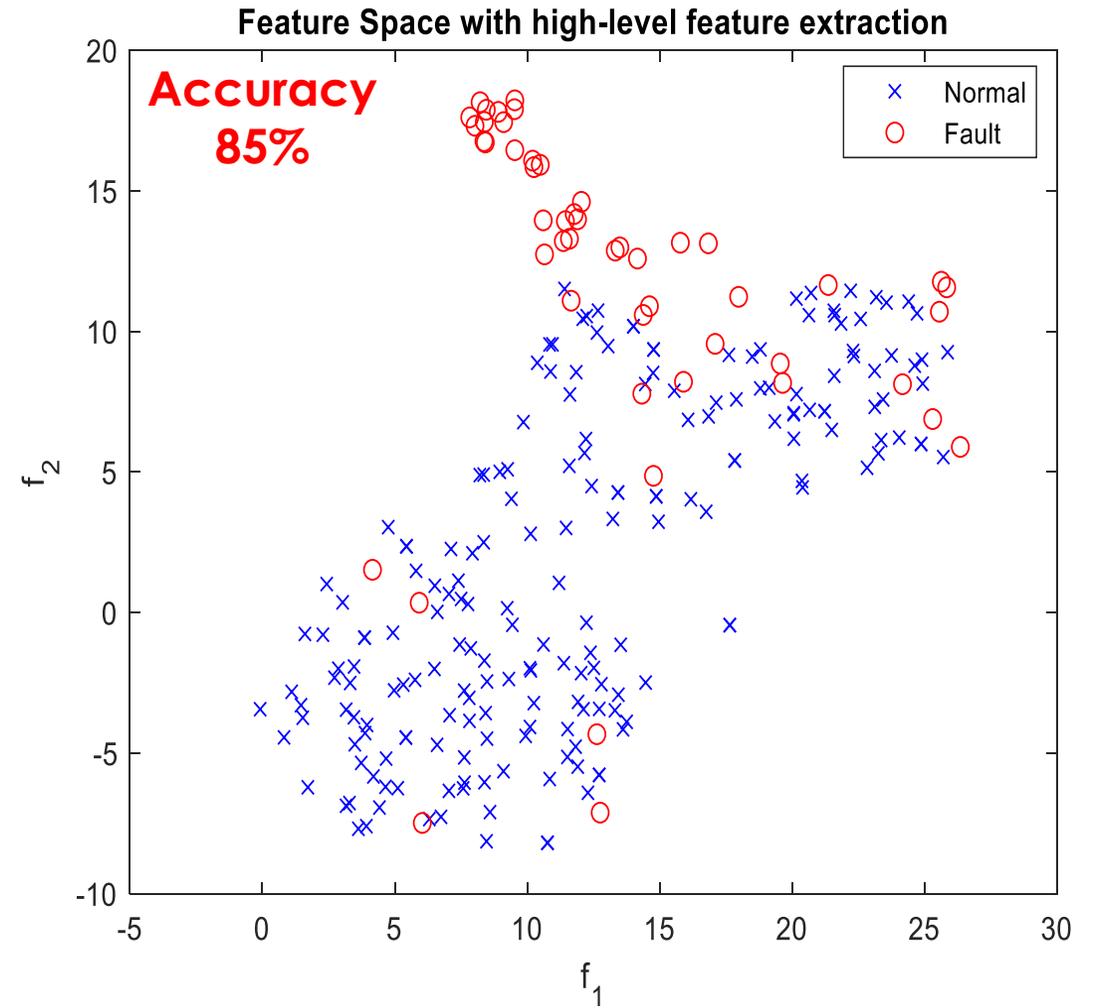

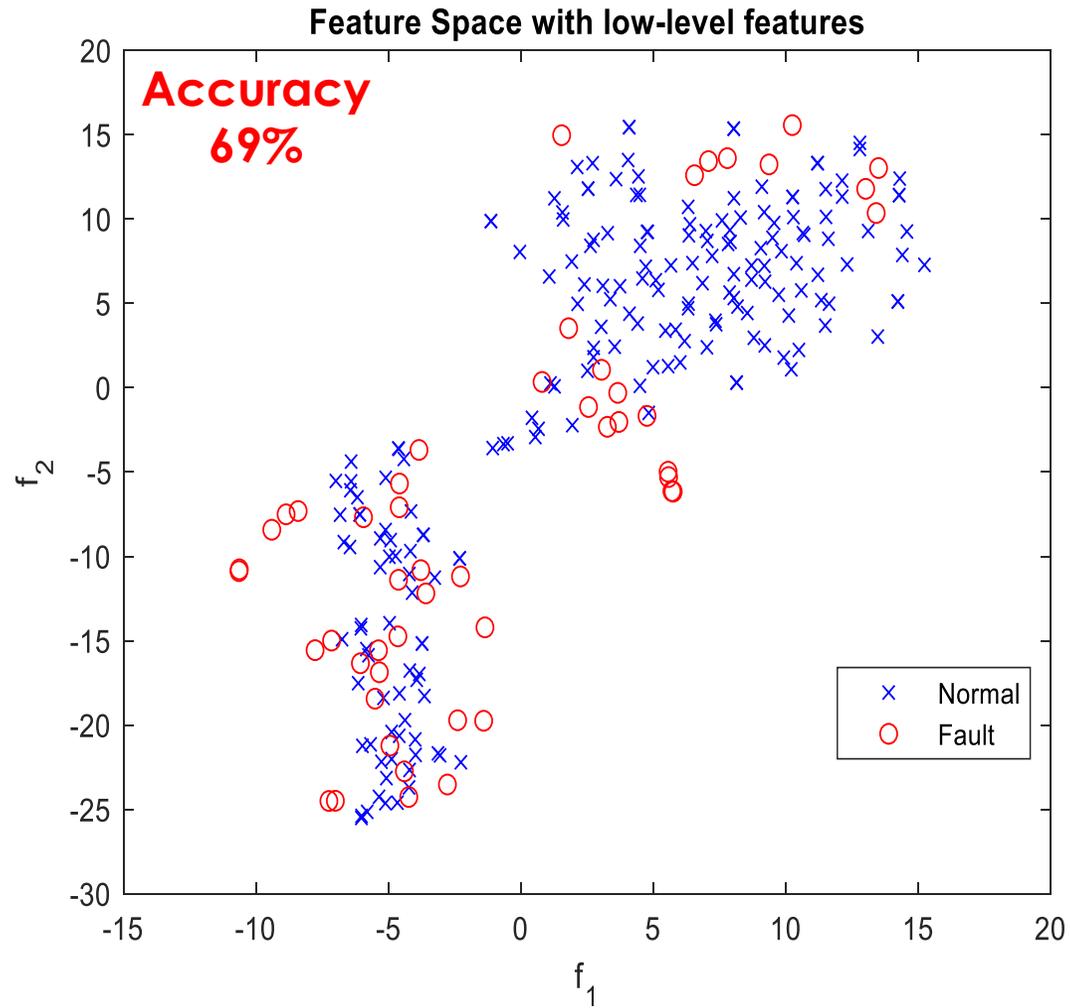

# Case Study II - Suspension System Anomaly Detection

- Physics-based feature extraction (low level)
- ML-based feature reconstruction (high level)

# Results

# CHALLENGES & OPPORTUNITIES

- ❑ Imbalanced data
- ❑ learning with unlabeled or weak-labeled data
- ❑ Sensor fusion (vibration, energy type of measurements)
- ❑ Lack of understanding degradation mechanism
- ❑ Sampling Strategy (static, dynamic, event-driven)
- ❑ Physics-based or Data-driven methods fusion and interface design
- ❑ ...
